PROGRAM AT A GLANCE

- ✓ Pragmatic 5-days program, two regions
- ✓ Presentations by industry specialists
- ✓ Individual B2B meetings
- ✓ Visit to plants and techno hubs
- ✓ Workshops and Networking platforms

RUSSIAN SPACE INDUSTRY

SPACE CARRIERS | ROCKET ENGINES | SATELLITES

RUSSIAN SPACE INDUSTRY IS AT A CORNER STONE

The Russian space industry has gone through radical changes over the past few years. It follows major global trends such as the growth in the civil and aviation sectors, innovations in materials and technologies, the globalization of production and the growth in orbital shipments.

THE STATE HOLDING ROSCOSMOS CONTROLS MOST COMPANIES

The Russian Space Agency maintains a high level of control on the industry and supervises almost all operations, including purchases, production, international cooperation and technological exploitation.

Official development plans and projects in all three segments are ambitious and will open new opportunities for foreign companies as the development of civil applications are increasingly becoming a top priority.

OPPORTUNITIES FOR SWISS SME

Though slower than in the US, the emergence of Russian companies within the private sector is progressing. It is carried out either under the impulsion of innovation hubs such as Skolkovo or with the support of larger private companies with close ties to this sector. Though submitted to strict controls, these structures are more flexible and offer interesting entry points for foreign companies willing to work with large Russian state-corporations.

YOUR COMPLETE TRIP PACKAGE

- ✓ Round-trip tickets Moscow – Samara
- ✓ Airport transfers and local transportation
- ✓ Daily meals (including dinner networking)
- ✓ Overnight stays at 4-star hotels with breakfast included
- ✓ Organization of visits and B2B meetings
